ISO Public Protection Classification Results

Tillamook Fire District received official notice March 14, 2006 from ISO (Insurance Services Office, Inc.) on the results of the request for confirmation of Station coverage for the community of Cape Meares. On August 8, 2005, the district requested ISO to evaluate an additional station, fire engine, and volunteer response within the community in anticipation of lowering the fire suppression rating. Because the community is located beyond five road miles from the responding station in the City of Tillamook, the rating was Class 10.

Tillamook Fire District is pleased to report that effective 2/1/2006, the Cape Meares station was officially added to the ISO data base. Properties located within 1000 feet of a fire hydrant are now rated Class 4, properties located beyond 1000 feet of a fire hydrant but within five road miles of the station are a Class 8B.

Specific property ratings may be obtained by contacting:
